PREFACE

Current Neuropharmacology has grown exponentially in the last few years to reach an IF >7. However, it is not my merit. First, this is still the outcome of the excellent work of the previous EIC, Prof. Tom Salt. Second, I have the privilege to collaborate on a daily basis with Ms. Rabia Moin (Senior Publication Manager) and the whole staff of Bentham Science Publishers. They are superb! Rabia is the linking bridge between Authors, Reviewers, and Editors, and she is doing a great job combining precision, methodological rigor, and kindness. Last but not least, the established scientists who are members of the Editorial Board have greatly contributed to the success of the journal.

In addition to Review articles, Current Neuropharmacology publishes Editorials and, more recently, high-quality research articles and clinical trials. Current Neuropharmacology has published the following Special Issues in 2021:

6. Biomaterials for Neurotherapeutics: From Lab Discovery to Clinical Application, edited by Ting Li and Qiang Ao.

There are nine forthcoming Special Issues addressing hot topics in neurobiology and neuropharmacology, which will be published in 2022. The success of the journal has attracted many good scientists, who submitted their manuscripts to Current Neuropharmacology. The increasing number of the accepted manuscript may cause some delay in the publication process. In the coming year, we will do our best to shorten the review processing time and speed up the publication of the accepted articles in full conformity with the scientific rigor.

In conclusion, it is a great privilege to collaborate with Rabia and the other members of the staff and Editorial Board to promote further growth of Current Neuropharmacology for the benefit of the scientific community. The journal has the potential to become a leader in the field.

I wish you a Happy New Year!

Fedinando Nicoletti, MD
Full Professor of Pharmacology
University Sapienza of Rome,
IRCCS Neuromed, Pozzilli, Italy
EIC of Current Neuropharmacology
